

## Minicart: the revolution in logistics automation

Discover the Minicart, our latest addition to the family of automated guided vehicles (AGVs), specially developed to optimize your logistics processes. The Minicart is a versatile standard vehicle characterized by its open control architecture and adaptability.

### Open control architecture

Equipped with a Siemens S7 controller, the Minicart offers you the freedom to seamlessly integrate your own applications. Customize the system to your specific needs and retain full control over your logistics processes.

### Modular extensions

The Minicart is more than just a vehicle for transports; it is a platform for efficiency. Choose from our range of modular extensions:

- **Roller conveyor:** available in various sizes and configurations, ideal for fast and smooth material transport
- **Lifting platform:** perfect for tasks that require variable height adjustment
- **Rigid shelf:** provides a stable and secure surface for your goods

### Your advantage

With the Minicart, you can rely on flexibility and scalability. Expand your capacities, reduce manual intervention and increase the efficiency of your logistics processes.

### Technical Data:

- Logistics-AGV for the transport of KLTs, containers, racks etc.
- Payload: 110 kg
- Dimensions: 750 mm x 575 mm x 350 mm
- Functions: platform, lift table, conveyor, customized application
- Control: Siemens S7
- Laser-based navigation with obstacle avoidance
- Interface: VDA5050
- Velocity: 90 m/min
